ALL•MIX®

CERTIFICATIONS

SUBSTRATE

WHAT IS ALL•MIX®?

All•Mix® literally does it all for you – creating the optimum environment for plants to flourish throughout the year. This heavily pre-fertilized substrate mixture emulates a rich outdoor soil with a full micro active ecosystem. And it's been designed to have enough nutrient-fuelled power to sustain lush growth for a couple weeks, without any need to add any extra fertilizer.

The pH and EC values

Biobizz® products only contain natural organic elements rather than mineral salts such as magnesium or sulfates that you might find in synthetic fertilizers. This gives **All•Mix®** a high Electrical Conductivity (EC) value. And while its organic elements are impossible to measure, they do have a self-regulating system, which helps maintain the pH values at the correct level.

HOW TO USE IT

When using **All•Mix®** for the first time, moisten it with water and leave it to stand for 36 hours. This gives the **Pre•Mix™** active fertiliser and the microorganisms in the growing medium a chance to work their magic before you add the plants.

APPLICATION

Keep the soil slightly warm at all times – if it's too cool, the microbial activity slows down, which makes it more difficult for the plants to grow. You also want to allow the soil to dry out between each watering. Because, as the **All•Mix®** substrate dries out, fresh air gets in, which helps the soil to breathe.
