

 **Before you start** make a warm bed by using Biobizz[®] substrates

 **Start using fertilizers** when your baby plant is 10-15 cm or has 2-4 leaves

 **A pH-value** between 6.2 and 6.5 is ideal
Controlled pH-value between 6.2 and 6.3

 **Water 2-3 times a week**, no need to water till run-off

 **It is always better** to be modest than to add more. A plant will not die from too little nutrients, but it won't survive an overdose

 **Ca**
Mg

 **You can mix several fertilizers** in the same feeding water

We recommend to use our Calmag supplement **every watering when growing with RO or very soft water** or once a week in case of noticing Ca/Mg deficiency signs

Follow this schedule when using **ALL-MIX[®]**

Follow this schedule when using **LIGHT-MIX[®]** or **COCO-MIX[®]**

¹ The vegetative phase can last for as long as needed.

² It is beneficial to replace **Bio-Grow[®]** with **Fish-Mix[™]** in the vegetative phase but switch to **Bio-Grow[®]** when you want to trigger flowering.

³ For every system: soil, hydro & aeroponics.

⁴ **Alg-A-Mic[™]**, **Acti-Vera[®]** and **Fish-Mix[™]** can also be applied as a foliar, 1-3 times a week until the second week of flowering.

 **Dose:** When using 1 or 2 of the products: 1-2 ml/L water of each. When using all 3 products: max. 1ml/L water of each.

Microbes: Application once a week. Twice a week during high nutrient demand in growing and flowering stage.
